Higher Tier Chemistry 1H

#### Specimen 2018

Time allowed: 1 hour 45 minutes

#### Materials

For this paper you must have:

- a ruler
- a calculator
- the periodic table (enclosed).

#### Instructions

- Answer all questions in the spaces provided.
- Do all rough work in this book. Cross through any work you do not want to be marked.

#### Information

- There are 100 marks available on this paper.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.
- When answering questions 02.3, 05.2, 08.5 and 09.4 you need to make sure that your answer:
   is clear, logical, sensibly structured
  - Is clear, logical, sensibly structured
  - fully meets the requirements of the questionshows that each separate point or step supports the overall answer.

#### Advice

In all calculations, show clearly how you work out your answer.

ease write clearly, in block capitals.
entre number
Irname
prename(s)
andidate signature

This question is about halogens and their compounds.

**Table 1** shows the boiling points and properties of some of the elements inGroup 7 of the periodic table.

Element	Boiling point in <sup>°</sup> C	Colour in aqueous solution	
Fluorine	-188	colourless	
Chlorine	-35	pale green	
Bromine	Х	orange	
lodine	184	brown	

Table 1

0	1		1	Why does iodine have a higher boiling point than chlorine?
---	---	--	---	--

Tick <b>one</b> box.	[1	mark]
lodine is ionic and chlorine is covalent		
lodine is less reactive than chlorine		
The covalent bonds between iodine atoms are stronger		
The forces between iodine molecules are stronger		

**01**. **2** Predict the boiling point of bromine.

[1 mark]

A redox reaction takes place when aqueous chlorine is added to potassium iodide solution.

The equation for this reaction is:

$$Cl_2(aq) + 2KI(aq) \rightarrow l_2(aq) + 2KCI(aq)$$

#### **0 1 . 3** Look at **Table 1**.

What is the colour of the final solution in this reaction?		
Tick <b>one</b> box.		[1 mark]
Brown		
Orange		
Pale green		
Colourless		

**01**. **4** What is the ionic equation for the reaction of chlorine with potassium iodide? **[1 mark]** 

Tick one box.

$Cl_2 + 2K \rightarrow 2KCl$	
$2I^{-} + CI_2 \rightarrow I_2 + 2CI^{-}$	
$I^- + CI \rightarrow I + CI^-$	
$I^- + K^+ \rightarrow KI$	

#### Question 1 continues on the next page

**0 1** . **5** Why does potassium iodide solution conduct electricity?

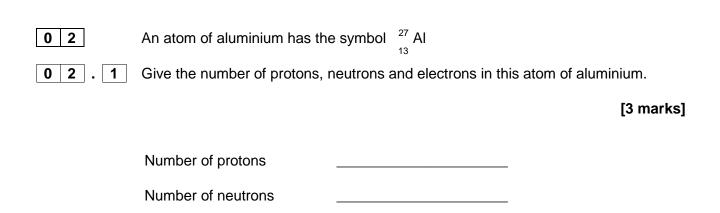

Tick <b>one</b> box.	[1 mark]
It contains a metal	
It contains electrons which can move	
It contains ions which can move	
It contains water	

**0 1 . 6** What are the products of electrolysing potassium iodide solution?

[1 mark]

Tick one box.

Product at cathode	Product at anode	
hydrogen	iodine	
hydrogen	oxygen	
potassium	iodine	
potassium	oxygen	

**0 2** . **2** Why is aluminium positioned in Group 3 of the periodic table?

Number of electrons

[1 mark]

#### Question 2 continues on the next page

#### **0 2 . 3** In the periodic table, the transition elements and Group 1 elements are metals.

Some of the properties of two transition elements and two Group 1 elements are shown in **Table 2**.

	Transition elements		Group 1 elements	
	Chromium	Iron	Sodium	Caesium
Melting point in °C	1857	1535	98	29
Formula of oxides	CrO $Cr_2O_3$ $CrO_2$ $CrO_3$	FeO Fe₂O₃ Fe₃O₄	Na <sub>2</sub> O	Cs <sub>2</sub> O

Table 2

Use your own knowledge **and** the data in **Table 2** to compare the chemical and physical properties of transition elements and Group 1 elements.

[6 marks]

**0 3 Figure 1** shows the outer electrons in an atom of the Group 1 element potassium and in an atom of the Group 6 element sulfur.

**0 3 . 1** Potassium forms an ionic compound with sulfur.

Describe what happens when two atoms of potassium react with one atom of sulfur.

Give your answer in terms of electron transfer.

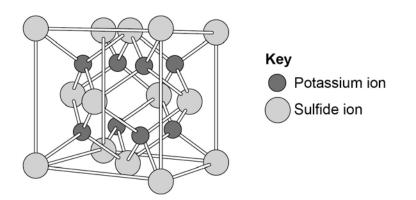

Give the formulae of the ions formed.

[5 marks]

Question 3 continues on the next page

**0 3 . 2** The structure of potassium sulfide can be represented using the ball and stick model in Figure 2.

The ball and stick model is **not** a true representation of the structure of potassium sulfide.

Give one reason why.

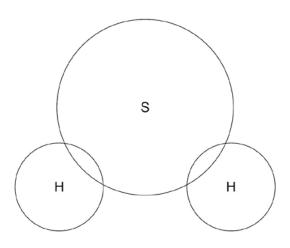

[1 mark]

#### **0 3 . 3** Sulfur can also form covalent bonds.

Complete the dot and cross diagram to show the covalent bonding in a molecule of hydrogen sulfide.

Show the outer shell electrons only.

[2 marks]

**0 3** . **4** Calculate the relative formula mass  $(M_r)$  of aluminium sulfate, Al<sub>2</sub>(SO<sub>4</sub>)<sub>3</sub>

Relative atomic masses ( $A_r$ ): oxygen = 16; aluminium = 27; sulfur = 32

[2 marks]

Relative formula mass =

**Question 3 continues on the next page** 

### **0 3 . 5** Covalent compounds such as hydrogen sulfide have low melting points and do **not** conduct electricity when molten.

Draw **one** line from each property to the explanation of the property.

[2 marks]

Property	Explanation of property
	Electrons are free to move
Low melting point	There are no charged particles free to move
	lons are free to move
	Weak intermolecular forces of attraction
Does not conduct electricity when molten	Bonds are weak
	Bonds are strong

#### 03.6

Ionic compounds such as potassium sulfide have high boiling points and conduct electricity when dissolved in water.

Draw **one** line from each property to the explanation of the property.

[2 marks]

Property

High boiling point

Conduct electricity when molten Explanation of property

Electrons are free to move

There are no charged particles free to move

lons are free to move

Weak intermolecular forces of attraction

Bonds are weak

Bonds are strong

Turn over for the next question

0	4	Rock salt is a mixture of sand and salt.

Salt dissolves in water. Sand does not dissolve in water.

Some students separated rock salt.

This is the method used.

- 1. Place the rock salt in a beaker.
- 2. Add 100  $\text{cm}^3$  of cold water.
- 3. Allow the sand to settle to the bottom of the beaker.
- 4. Carefully pour the salty water into an evaporating dish.
- 5. Heat the contents of the evaporating dish with a Bunsen burner until salt crystals start to form.

**0 4 . 1** Suggest **one** improvement to step 2 to make sure all the salt is dissolved in the water.

[1 mark]

0	4	-	2

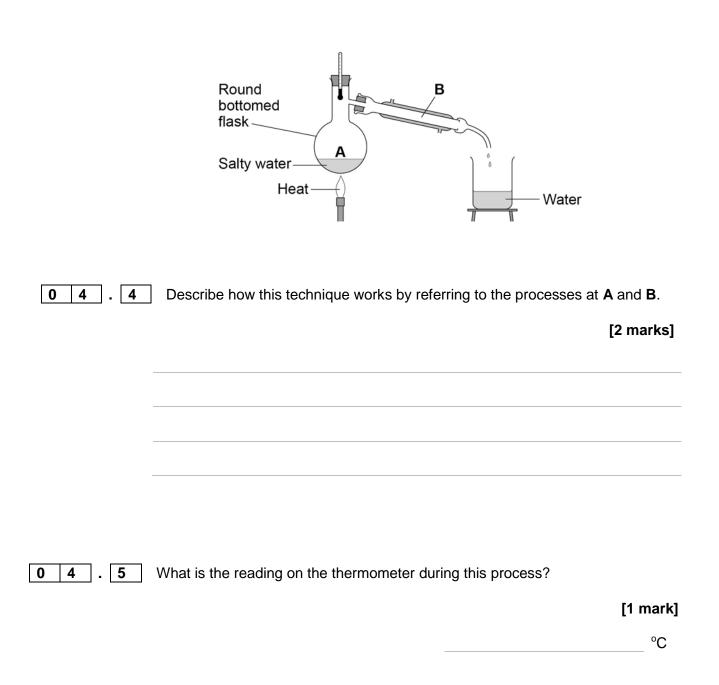

The salty water in step 4 still contained very small grains of sand.

Suggest one improvement to step 4 to remove all the sand.

[1 mark]

**0 4 . 3** Suggest **one** safety precaution the students should take in step 5.

[1 mark]

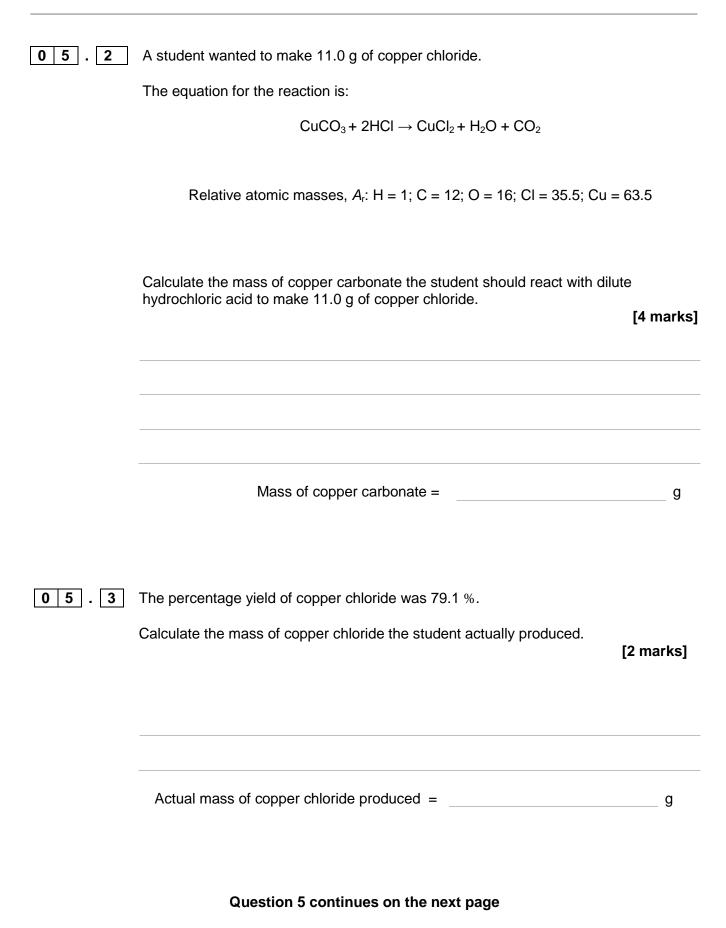

Another student removed water from salty water using the apparatus in Figure 3.

In both reactions one of the products is copper chloride.

**05. 1** Describe how a sample of copper chloride crystals could be made from copper carbonate and dilute hydrochloric acid.

[4 marks]

**5**. **4** Look at the equations for the two reactions:

	Reaction 1	$CuCO_3(s) + 2HCI(aq) \rightarrow CuCI_2(aq) + H_2O(I) + CO_3(s) $	:O <sub>2</sub> (g)
	Reaction 2	$CuO(s) + 2HCl(aq) \rightarrow CuCl_2(aq) + H_2O(l)$	
I	Reactive formu	la masses: CuO = 79.5; HCl = 36.5; CuCl <sub>2</sub> = 134.	5; H <sub>2</sub> O = 18
-	The percentage	e atom economy for a reaction is calculated using	:
		rmula mass of desired product from equation ative formula masses of all reactants from equatio	× 100 n
	Calculate the p	ercentage atom economy for Reaction 2.	[3 marks]
-			
-		Percentage atom economy =	%
05.5		onomy for Reaction 1 is 68.45 %. atom economies of the two reactions for making	copper chloride.
	Give a reasor	n for the difference.	[1 mark]

#### Turn over for the next question

**0 6** A student investigated simple cells using the apparatus shown in **Figure 4**.

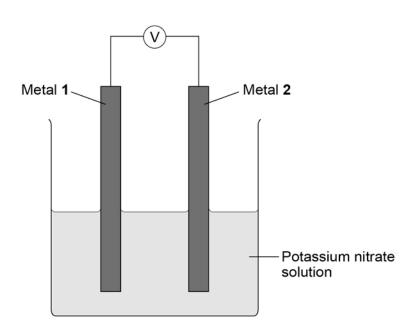

Figure 4

- If metal **2** is more reactive than metal **1** then the voltage measured is positive.
- If metal **1** is more reactive than metal **2** then the voltage measured is negative.
- The bigger the difference in reactivity of the two metals, the larger the voltage produced.

The student's results are shown in Table 3.

Table 3

Metal 2 Metal 1	Chromium	Copper	Iron	Tin	Zinc
Chromium	0.0 V				
Copper	1.2 V	0.0 V			
Iron	0.5 V	not measured	0.0 V		
Tin	0.8 V	-0.4 V	0.3 V	0.0 V	
Zinc	0.2 V	-1.0 V	-0.3 V	-0.6 V	0.0 V

 $Zn \rightarrow Zn^{2+} + 2e^{-}$ 

Zinc is oxidised in this reaction.

Give a reason why this is oxidation.

[1 mark]

#### **0 6 . 2** Look at **Table 3**.

Metal

Reason

Which one of the metals used was the least reactive?

Give a reason for your answer.

[2 marks]

Question 6 continues on the next page

## 0 6 . 3 Predict the voltage that would be obtained for a simple cell that has iron as metal 1 and copper as metal 2.

	Explain your answer.	3 marks]
06.4	Hydrogen fuel cells have been developed for cars.	
	Write a word equation for the overall reaction that takes place in a hydrogen f	uel cell. [1 mark]
06.5	Write the <b>two</b> half equations for the reactions that occur at the electrodes in a hydrogen fuel cell.	a 2 marks]

#### Turn over for the next question

Sodium carbonate reacts with dilute hydrochloric acid:

 $Na_2CO_3 + 2HCI \rightarrow 2NaCI + H_2O + CO_2$ 

A student investigated the volume of carbon dioxide produced when different masses of sodium carbonate were reacted with dilute hydrochloric acid.

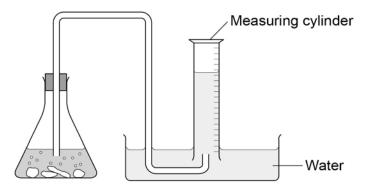

This is the method used.

0 7

- 1. Place a known mass of sodium carbonate in a conical flask.
- 2. Measure 10 cm<sup>3</sup> of dilute hydrochloric acid using a measuring cylinder.
- 3. Pour the acid into the conical flask.
- 4. Place a bung in the flask and collect the gas until the reaction is complete.

**0 7 . 1** The student set up the apparatus as shown in Figure 5.

#### Figure 5

Identify the error in the way the student set up the apparatus.

Describe what would happen if the student used the apparatus shown.

[2 marks]

The student corrected the error.

The student's results are shown in Table 4.

Mass of sodium carbonate in g	Volume of carbon dioxide gas in cm <sup>3</sup>
0.07	16.0
0.12	27.5
0.23	52.0
0.29	12.5
0.34	77.0
0.54	95.0
0.59	95.0
0.65	95.0

Table 4	
---------	--

**0 7 . 2** The result for 0.29 g of sodium carbonate is anomalous.

Suggest what may have happened to cause this anomalous result.

[1 mark]

**07**. **3** Why does the volume of carbon dioxide collected stop increasing at 95.0 cm<sup>3</sup>? [1 mark]

Question 7 continues on the next page

07.4	What further work could the student do to be more certain about the minimum mass of sodium carbonate needed to produce 95.0 cm <sup>3</sup> of carbon dioxide?			
	[1 mark]			
07.5	The carbon dioxide was collected at room temperature and pressure. The volume of one mole of any gas at room temperature and pressure is 24.0 dm <sup>3</sup> .			
	How many moles of carbon dioxide is 95.0 cm <sup>3</sup> ?			
	Give your answer in three significant figures. [2 marks]			
	mol			
0 7 . 6	Suggest <b>one</b> improvement that could be made to the apparatus used that would give more accurate results.			
	Give a reason for your answer. [2 marks]			

### **07. 7** One student said that the results of the experiment were wrong because the first few bubbles of gas collected were air.

A second student said this would make no difference to the results.

Explain why the second student was correct.

[2 marks]

Turn over for the next question

0 8	Sodium hydroxide neutralises sulfuric acid.
	The equation for the reaction is:
	$2NaOH + H_2SO_4 \rightarrow Na_2SO_4 + 2H_2O$
08.1	Sulfuric acid is a strong acid.
	What is meant by a strong acid? [2 marks]
08.2	Write the ionic equation for this neutralisation reaction. Include state symbols. [2 marks]

A student used a pipette to add 25.0 cm<sup>3</sup> of sodium hydroxide of unknown concentration to a conical flask.

The student carried out a titration to find out the volume of 0.100 mol/dm<sup>3</sup> sulfuric acid needed to neutralise the sodium hydroxide.

**0 8 . 3** Describe how the student would complete the titration.

You should name a suitable indicator and give the colour change that would be seen. [4 marks]

Question 8 continues on the next page

The student carried out five titrations. Her results are shown in Table 5.

#### Table 5

	Titration 1	Titration 2	Titration 3	Titration 4	Titration 5
Volume of 0.100 mol/dm <sup>3</sup> sulfuric acid in cm <sup>3</sup>	27.40	28.15	27.05	27.15	27.15

**0 8** . **4** Concordant results are within  $0.10 \text{ cm}^3$  of each other.

Use the student's concordant results to work out the mean volume of 0.100 mol/dm<sup>3</sup> sulfuric acid added.

[2 marks]

 $\rm cm^3$ Mean volume =

08.5	The equation for the reaction is:	
	$2NaOH + H_2SO_4 \rightarrow Na_2SO_4 + 2H_2O$	
	Calculate the concentration of the sodium hydroxide.	
	Give your answer to three significant figures.	[4 marks]
	Concentration =	mol/dm <sup>3</sup>
08.6	The student did another experiment using 20 cm <sup>3</sup> of sodium hydroxide a concentration of 0.18 mol/dm <sup>3</sup> .	solution with
	Relative formula mass ( $M_r$ ) of NaOH = 40	
	Calculate the mass of sodium hydroxide in 20 cm <sup>3</sup> of this solution.	[2 marks]
	Mass =	g

#### Turn over for the next question

09 This question is about the reaction of ethene and bromine.

The equation for the reaction is:

$$C_2H_4$$
 +  $Br_2 \rightarrow C_2H_4Br_2$ 

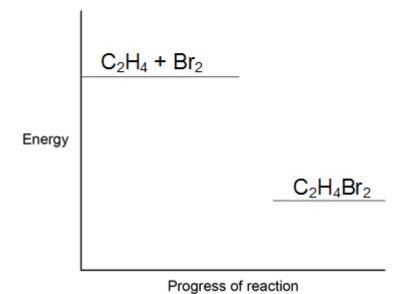

**0 9** . **1** Complete the reaction profile in **Figure 6**.

Draw labelled arrows to show:

- The energy given out ( $\Delta H$ )
- The activation energy.

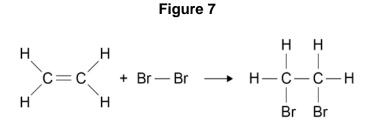

[3 marks]

0 9 . 2 When ethene reacts with bromine, energy is required to break covalent bonds in the molecules. Explain how a covalent bond holds two atoms together. [2 marks]

Figure 7 shows the displayed formulae for the reaction of ethene with bromine.

The bond enthalpies and the overall energy change are shown in Table 6.

#### Table 6

	C=C	C–H	C–C	C–Br	Overall energy change
Energy in kJ/mole	612	412	348	276	-95

0 9 . 3 Use the information in **Table 6** and **Figure 7** to calculate the bond energy for the Br-Br bond.

[3 marks]

Bond energy

kJ/mole

**0 9 . 4 Figure 8** shows the reaction between ethene and chlorine and is similar to the reaction between ethene and bromine.

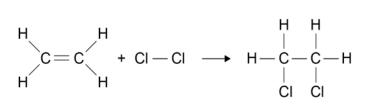

Figure 8

"The more energy levels (shells) of electrons an atom has, the weaker the covalent bonds that it forms."

Use the above statement to predict and explain how the overall energy change for the reaction of ethene with chlorine will differ from the overall energy change for the reaction of ethene with bromine.

[6 marks]
